Subject Index

A

ABA (*see* Abscisic acid)
Abies alba, antioxidant production, SO_2 and O_3, 336
Abscisic acid
  abscisyl-β-D-glucopyranoside and, occurrence in developing and mature citrus fruit, 339
  levels in developing floral organs, navel orange, 1164
  mode of action, barley aleurone layers, 289
  proline accumulation, inhibition, barley leaves, 703
  quantitative determination, highly sensitive method, 600
Abscission, mango fruitlets, enhanced ethylene biosynthesis, 991
Abscisyl-β-D-glucopyranoside, abscisic acid and, occurrence in developing and mature citrus fruit, 339
Acclimation
  cyanobacterial, photosystem I or II light, *Synechococcus*, 185
  turgor recovery without water uptake, wilted and excised cabbage leaves, 147
Acer pseudoplatanus, cytoplasmic pH regulation, 840, 846
Acetate, fermentative metabolism, *Chlamydomonas reinhardtii*, 160
Acetobacter xylinum, oxygen isotope exchange, cellulose synthesis, 423
Acetylene, reduction, H_2 evolution, nodulated peas, 154
Actin filaments, microtubules and, organelle movements, characean algae, 631
Acyl carrier protein
  isoform activity, fatty acid metabolism, spinach, 448
  NADH-dependent acetoacetyl-CoA reductase, *Euglena gracilis*, 978
Adenosine triphosphatase
  lipid body membranes, castor bean endosperm, 671
  organelle movements, actin filaments and microtubules, characean algae, 631
Adenosine triphosphate, plasma membrane hydrogen pump, fusicoccin stimulation, radish, 121
ADPglucose pyrophosphorylase, gene expression, developing wheat endosperm, 34
Agmenellum quadruplicatum, carbohydrate turnover, salt shock-induced, carbon-13 NMR studies, 646
Agrobacterium, plasmid-harboring strains, response to cucurbit infection, 622
Alanine, transport pathway, grain filling in wheat, 1019
Aldehyde, oxidation, betaine, spinach chloroplasts, 753
Aldolase, anaerobically induced, amino acid sequence, maize cDNA clones, 1076
Aleurone
  barley
    abscisic acid, mode of action, 289
    nuclease secretion, response to gibberellic acid, 801
  dwarf wheat
    GA_3 responsiveness, 688
    IAA-induced GA_3 sensitivity, 685
  protoplasts, development, calcium-stimulated α-amylase secretion, 566
Alfalfa, root nodules, asparagine biosynthesis, 390
Algae
  characean, organelle movements, actin filaments and microtubules, 631
  extracts, δ-aminolevulinic acid formation, heterologous RNA, 1096
Alocasia macrorrhiza, response to lightflecks, postillumination CO_2 assimilation, photosynthesis metabolites, 1063
Amaranthus paniculatus, light and temperature effects, phosphoenolpyruvate carboxylase, 518
Amino acids
  composition along transport pathway, grain filling in wheat, 1019
  effects of calcium, accumulation in roots, *Phaseolus vulgaris*, 41
  metabolism of *Lemna minor*, responses to methionine sulfoximine, 1057
1-Aminocyclopropane-1-carboxylic acid, enhanced development of ethylene forming enzyme, carbon dioxide, tobacco leaf discs, 925
α-Aminoisobutyric acid, effects of calcium, *Phaseolus vulgaris*, transport and accumulation, 41
δ-Aminolevulinic acid, formation, algal extracts, heterologous RNA, 1096
Ammonium
  nitrate and, photosynthetic suppression, N-limited *Selenastrum minutum*, 708
  utilization as nitrogen source, soybean, 54
α-Amylase
  calcium-stimulated secretion, development, barley aleurone protoplasts, 566
  preferential selection of R-type molecules, rice seed scutellum, high temperatures, 880
Amyloplasts, formation, influence of gravity, corn columella cells, 864
Anabaena, cyanobacterial ferredoxin-$NADP^+$ oxidoreductase, thylakoid-bound, 499
Anacystis nidulans
  effects of gabaculine, pigment biosynthesis, 280
  mutant, high CO_2, 610
Ananas comosus (*see* Pineapple)
Anemia mexicana, *A. phyllitidis* and, spore germination, gametophyte development, 230
Ankistrodesmus braunii, reversible inactivation, nitrate reductase, hydroxylamine, 65
Antioxidants, production, SO_2 and O_3, conifers, 336
Apium graveolens (*see* Celery)
Apoplasm, symplastic growth and transport, 1153
Apple
  dwarfing interstocks and GA distribution, 1090
  seedlings, paclobutrazol translocation, 11
Arabinogalactan-proteins, female sexual tissue, *Nicotiana alata*, 885
Arachis hypogaea (*see* Peanut)
Arginine decarboxylase, inhibitor, oat protoplast improvement, osmotic stress, 375
Arsenite, sulfite and, effects on photosynthesis, pea chloroplasts, 488
Asparagine, biosynthesis, alfalfa root nodules, 390
ATPase (*see* Adenosine triphosphatase)
ATP (*see* Adenosine triphosphate)
Atrazine, glyphosate and, apoplastic and symplastic pathways, shoots of seedling sunflower, 1000
Auxin
  endogenous, ethylene and, lichen *Ramalina duriaei*, 1122
  insensitivity, *dgt* tomato, 713
Avena sativa (*see* Oat)
Ayapin, scopoletin and, metabolism, sunflower, 167

B

Bacteroids, stability, dark-induced senescence, soybean root nodules, 346
Barley
  aleurone layers
    abscisic acid, mode of action, 289
    nuclease secretion, response to gibberellic acid, 801
  aleurone protoplasts, development, calcium-stimulated α-amylase secretion, 566
  primary leaves, photosynthetic sucrose synthesis, 15
  root
    lactate dehydrogenase, hypoxically induced, 664
    lactate dehydrogenase isozymes, oxygen deficit, 658
Bean
  control of rust fungus, inhibited polyamine biosynthesis, 485
  leaf, putrescine accumulation, cadmium-induced, 641
  lipid peroxidation, role of glutathione reductase, 700
  photosynthesis, salinity and nitrogen effects, ribulose-1,5-bisphosphate carboxylase, 555
  roots, effects of calcium, amino acid transport, 41
  stomata, dark circadian rhythms, photocontrol, 28
Beet
  leaves, carbon to starch, glyphosate-inhibited photosynthesis, 468
  symplast transport, *Ipomea tricolor* source leaves, 432
Benzyladenine, ABA and proline accumulations, inhibition, barley leaves, 703
Betaine, aldehyde oxidation, spinach chloroplasts, 753
Beta vulgaris (*see* Beet)
Brassica napus (*see* Canola, Rapeseed)

Brassica oleracea (*see* Cabbage)
Broad bean
enhanced sucrose export from source leaves, gibberellic acid, 962
normal and inverted leaves, adaxial and abaxial stomata, responses to light, 384
Bromphenol blue, properties, electron donor, NADH:nitrate reductase, 729

C

Cabbage
anthocyanin production, photoregulation under blue light, 952
wilted and excised leaves, turgor recovery, absence of water uptake, 147
Cadaverine, ethylene inhibition, polyamine biosynthetic enzymes, pea seedlings, 607
Cadmium
induced putrescine accumulation, oat and bean leaves, 641
variation in accumulation, tissue distribution, tobacco, 274
Calcium
activated phytase, pollen, *Lilium longiflorum*, 333
α-amylase secretion, development, barley aleurone protoplasts, 566
effects on amino acid transport, roots, *Phaseolus vulgaris*, 41
organelle movements, actin filaments and microtubules, characean algae, 631
uptake, endoplasmic reticulum, zucchini hypocotyls, 47
Calcium chloride, sodium chloride and, cell enlargement and production, cotton roots, 1102
Callus, regenerating, NADH nitrate reductase, genetic variants of maize, 473
Calmodulin, biological clock-controlled processes, *Euglena gracilis*, 226
CAM plants (*see* Crassulacean acid metabolism plants)
Canavalia gladiata (*see* Sword bean)
Canavalmine, sym-homospermidine and, distribution and metabolism, sword bean, 795
Canola, triazine-resistant and -susceptible isolines, characterization, 859
Canopy, photosynthesis, plant productivity, leaf morphology in cotton lines, 635
Capsicum annuum (*see* Pepper)
Carbohydrates
assimilation, liquid culture, carrot cells, 363
organic acid and, effects of water stress, cotton plants, 724
turnover, salt shock-induced, marine cyanobacterium, 646
Carbon
accumulation, photosynthesis in leaves, nitrogen- and phosphorus-stressed cotton, 869
assimilation, liquid culture, carrot cells, 363
glyphosate-inhibited photosynthesis, beet leaves, 468
metabolism, osmotic stress, *Chlamydomonas reinhardtii*, 594
regulation of flow, nitrogen and light, *Gelidium coulteri*, 136
Carbon dioxide
effects of atmospheric enrichment, white oak, nutrient-poor soil, 83
elevated, CAM plant responses, 604
enhanced development of ethylene forming enzyme, tobacco leaf discs, 925
enrichment, photosynthesis and growth, water hyacinth, 528
exchange, *Welwitschia mirabilis* leaves, stomatal components, 173
fermentative metabolism, *Chlamydomonas reinhardtii*, 160
high, mutant *Anacystis nidulans*, 610
photosynthesis, sulfite and arsenite, pea chloroplasts, 488
photosynthetic gas exchange, developmental changes, celery, 307
postillumination assimilation, response to lightflecks, *Alocasia macrorrhiza*, 1063
ribulose 1,5-bisphosphate carboxylase, effects of pH, spinach, 77
rubisco activation, rubisco activase, spinach, 967
transfer to C_3-plants, 1167
Carotenoid pigments, deficiency, maize leaves, chloroplast protein photooxidation, 760
Carrot
cells, carbon assimilation, liquid culture, 363
3-deoxy-D-*arabino*-heptulosonate 7-phosphate synthase, from potato tuber, 1040
oxygen isotope exchange, cellulose synthesis, 423
Cassia fasciculata, leaf movements, metabolic inhibitors, 270
Castor bean
endosperm, ATPase, lipid body membranes, 671
maturing oil seeds, diacylglycerol acyltransferase, 813
oxygen isotope exchange, cellulose synthesis, 423
Cavitation, xylem, detection in corn, field conditions, 597
C_3-C_4, *Flaveria*, phosphoenolpyruvate carboxylase, kinetic properties, 695
Celery, developmental changes, photosynthetic gas exchange, 307
Cell culture, mineral nutrient requirements, loblolly pine, 942
Cellulose
synthesis, oxygen isotope exchange, metabolites and water, 423
xyloglucan and, pea, 301
Cell wall, xyloglucan and rhamnogalacturonan I, immunogold localization, sycamore cells, 787
Chara corallina, cytoplasmic K^+ concentration, plasma membrane electrical parameters, 417
Chilling, injury, putrescine accumulation, lemons/grapefruit/peppers, 324
Chlamydomonas pulsatilla, osmoregulatory responses, glycerol and inorganic ions, 406
Chlamydomonas reinhardtii
carbon metabolism, osmotic stress, 594
fermentative metabolism, 160
glycolate metabolism and excretion, 813
nitrite uptake and reduction, kinetic characterization, 904
water oxidation complex, 114
Chlorophyll
fluorescence, mannose metabolism in corn, 1081
import of light-harvesting chlorophyll *a/b*-proteins, amino termini and transit peptides, 1172
tobacco mutant, photosystem II activity, developmental loss, 19
Chloroplasts
cucumber, regeneration, magnesium-2,4-divinylpheoporphyrin a_5, 285
import of light-harvesting chlorophyll *a/b*-proteins, amino termini and transit peptides, 1172
mesophyll and guard cell, state changes, *Saxifraga cernua*, 873
pea
glutathione reductase, purification and characterization, 351
photosynthesis, effects of sulfite and arsenite, 488
proplastids and, synthesis and turnover of protein, *Euglena gracilis*, 972
proteins, fate during photooxidation, carotenoid-deficient maize leaves, 760
spinach
betaine aldehyde oxidation, 753
exogenous palmitate desaturation, hexadecatrienoate, 357
sunflower, photosynthesis at low water potentials, 90
tobacco mutant, photosystem II activity, developmental loss of activity, 19
tomato, restriction enzyme analysis, 1145
Chlorotetracycline, calcium uptake, endoplasmic reticulum, zucchini hypocotyls, 47
Chromoplast DNA, tomato, restriction enzyme analysis, 1145
Circadian rhythms, dark, photocontrol, *Phaseolus vulgaris* stomata, 28
Citrus fruit, developing and mature, occurrence, abscisic acid and abscisyl-β-D-glucopyranoside, 339
Clover, leaf, copper nutrition, biosynthesis of diamine oxidase, 1126
Coenzyme A, NADH-dependent acetoacetyl-CoA reductase, *Euglena gracilis*, 978
Coenzyme A reductase, 3-hydroxy-3-methylglutaryl activity, *Ochromonas malhamensis*, 523
Colchicum autumnale (*see* Meadow saffron)
Columella cells, corn, influence of gravity, formation of amyloplasts, 864
β-Conglycinin, glycinin and, differential proteolysis, soybean germination and growth, 71
Conifers, antioxidant production, SO_2 and O_3, 336
Copper, nutrition and developmental state, biosynthesis of diamine oxidase, clover leaves, 1126
Cordycepin, ABA and proline accumulations, inhibition, barley leaves, 703
Corn
cDNA clones, amino acid sequence, anaerobically induced aldolase, 1076
cell-specific gene expression, 613
columella cells, influence of gravity, formation of amyloplasts, 864
cytosol alkalinization, weak acid uptake and cell sap pH, 316
embryos
regulation of gene expression, 543
synthesis of globulins, 1069
leaf
carotenoid deficiency, chloroplast protein photooxidation, 760
phosphoenolpyruvate carboxylase, *in vitro* phosphorylation, 1107

phosphoenolpyruvate carboxylase, light modulation, 550
mannose metabolism, photosynthesis and fluorescence, 1081
maturing oil seeds, diacylglycerol acyltransferase, 813
regenerating callus, NADH nitrate reductase, 473
reproductive growth, nitrogen uptake and redistribution, 247
root
growth zone, potassium and solutes, 853
heat shock, metabolism of glutathione, 1031
hydroxamate-stimulated O_2 uptake, peroxidase mediation, 236
nitrate reductase, intercellular localization, 675
serial analysis of zein, 196
xylem cavitation, field conditions, 597
Cortex, nitrate reductase, intercellular localization, corn roots, 675
Cotton
effects of water stress, organic acid and carbohydrate compositions, 724
near-isogenic, leaf morphology and plant productivity, canopy photosynthesis, 635
nitrogen- and phosphorus-stressed, carbon accumulation, photosynthesis in leaves, 869
nonsenescing leaves, cytokinin-induced ethylene synthesis, 930
root, cell enlargement and production, effects of NaCl and $CaCl_2$, 1102
wild-type plant tissue, opine synthesis, 218
Cotyledons
cucumber, effects of wounding, cytokinin activity, 1151
soybean, gibberellin metabolism, 241
C_4 pathway, pyruvate and orthophosphate dikinase, variation in amounts, wheat, 96
C_3 plants
enzymes of glucose oxidation, leaf tissues, 503
photosynthetic tissues, oxygen and hydrogen isotope ratio, CAM, 428
transfer of carbon dioxide, diffusion, 1167
C_4 plants, enzymes of glucose oxidation, leaf tissues, 503
Crassula argentea, phosphoenolpyruvate carboxylase, malate inhibition, 985
Crassulacean acid metabolism plants
electrophoretic analysis, vacuole and tonoplast proteins, 916
oxygen hydrogen isotope ratios, photosynthetic tissues, C_3 plants, 428
responses, elevated CO_2, 604
Cryptochrome, phytochrome and anthocyanin production, photoregulation under blue light, tomato and cabbage, 952
Cucumber
chloroplasts, magnesium-2,4-divinylpheoporphyrin a_5, regeneration, 285
cotyledons, effects of wounding, cytokinin activity, 1151
Cucumis sativus (*see* Cucumber)
Cucurbits, response to infection, plasmid-harboring strains, *Agrobacterium*, 622
Cyanobacterium, *Agmenellum quadruplicatum*, carbohydrate turnover, salt shock-induced, 646
Cycloheximide, ABA and proline accumulations, inhibition, barley leaves, 703
Cylindrotheca fusiformis, *Chlamydomonas*, water oxidation complex, 114
Cytokinin
activity, effects of wounding, cucumber cotyledons, 1151
induced ethylene synthesis, nonsenescing cotton leaves, 930
production, *Pseudomonas savastanoi*, 742
Cytoplasm
improved delivery to protoplasts, pH-sensitive liposomes, 179
pH regulation, *Acer pseudoplatanus* cells, 840, 846
potassium concentration, plasma membrane electrical parameters, *Chara corallina*, 417
Cytoskeleton, cell enlargement and production, effects of NaCl and $CaCl_2$, cotton roots, 1102
Cytosol, alkalinization, weak acid uptake and cell sap pH, corn, 316

D

Daucus carota (*see* Carrot)
3-Deoxy-D-*arabino*-heptulosonate 7-phosphate synthase
from potato tuber, 1040
two-isozyme system, *Nicotiana silvestris*, 203
Deoxyribonucleic acid, cDNA clones, sequence of maize anaerobic aldolase, 1076
Diacylglycerol acyltransferase, maturing oil seeds, maize and other species, 813
Diamine oxidase, biosynthesis, copper nutrition, clover leaves, 1126
α-Difluoromethylornithine, control of bean rust fungus, inhibited polyamine biosynthesis, 485
DNA (*see* Deoxyribonucleic acid)
Dolichyl phosphate, solubilization of GlcNAc-1-P-transferase, soybean cells, 748
Drought (*see* Water stress)

E

Eichhornia crassipes (*see* Water hyacinth)
Embryogenesis, corn, regulation of gene expression, 543
Endoplasmic reticulum, calcium uptake, zucchini hypocotyls, 47
Endosperm
castor bean, ATPase, lipid body membranes, 671
wheat, development, gene expression, 34
Enzymes
C_4 pathway, variation in amounts, wheat, 96
dynamics, during rehydration, *Selaginella lepidophylla*, 61
glucose oxidation, leaf tissues, 503
hydrolyzing, fructose-1,6-biphosphatase, *Peltigera rufescens*, 462
immunoassay, abscisic acid and abscisyl-β-D-glucopyranoside, occurrence, developing and mature citrus fruit, 339
photosynthetic, regulation of activation, corn, 312
polyamine biosynthetic, ethylene inhibition, cadaverine accumulation in pea seedlings, 607
water-oxidizing, photoactivation, wheat, 261
Erwinia chrysanthemi, induced plasmalemma K^+/H^+ exchange, tobacco, 142
Erythrocytes, new lectin from meadow saffron, 1036
Ethylene
cytokinin-induced biosynthesis, nonsenescing cotton leaves, 930
Diageotropica tomato, auxin insensitivity, 713
endogenous auxin and, lichen *Ramalina duriaei*, 1122
enhanced biosynthesis, abscission, mango fruitlets, 991
enhanced enzyme development, carbon dioxide, tobacco leaf discs, 925
exogenously applied, foliar gas exchange, 653
gravitropism, higher plants, 534
inhibited polyamine biosynthetic enzymes, lysine decarboxylase activity and cadaverine accumulation, pea seedlings, 607
Euglena gracilis
acetoacetyl-CoA reductase, NADH-dependent, 978
calmodulin role, biological clock-controlled processes, 226
Chlamydomonas, water oxidation complex, 114
proplastids and chloroplasts, synthesis and turnover of protein, 972
Exoamylase, activity in vacuoles, pea and wheat leaf protoplasts, 1119

F

Fatty acids
manipulation of composition, soybean cell cultures, 771
metabolism, acyl carrier protein isoforms, spinach, 448
tween-fatty acid esters, metabolism, soybean cells, 780
Fermentation, metabolism, *Chlamydomonas reinhardii*, 160
Ferredoxin-$NADP^+$ oxidoreductase, cyanobacterial, thylakoid-bound, *Anabaena*, 499
Flaveria, C_3-C_4, phosphoenolpyruvate carboxylase, kinetic properties, 695
Flaveria linearis, photosynthesis of F_1 hybrids, C_4 and C_3-C_4 species, 211
Floridoside, regulation of carbon flow, nitrogen and light, *Gelidium coulteri*, 136
Flower, female sexual tissue, arabinogalactan-proteins, *Nicotiana alata*, 885
Fluorescence emission spectra, state transitions, mesophyll and guard cell chloroplasts, *Saxifraga cernua*, 873
Freezing injury, protoplasmic swelling, symptom, onion bulb cells, 625
Fronds, *Selaginella lepidophylla*, enzyme dynamics, during rehydration, 61
Fructose 1,6-biphosphatase
photosynthetic sucrose synthesis, barley primary leaves, 15
seasonal changes, kinetic parameters, *Peltigera rufescens*, 457
two hydrolyzing enzymes, *Peltigera rufescens*, 462
Fructose 2,6-bisphosphate, effects on phosphoglucomutase, pea/string-bean/potato, 619
Fruitlets, mango, abscission, enhanced ethylene biosynthesis, 991
Fucose, xylogucan nonsaccharide, pea microsomal membranes, biosynthesis, 379
Fungus, control of bean rust, inhibited poly-

amine biosynthesis, 485
Fusicoccin
cytosol alkalinization, weak acid uptake and cell sap pH, corn, 316
plasma membrane H^+-ATPase, radish, 121

G

Gabaculine, effects of pigment biosynthesis, normal and nutrient deficient cells, *Anacystis nidulans*, 280
Gametophytes, development, spore germination, *Anemia mexicana* and *A. phyllitidis*, 230
Gas exchange
foliar, response to exogenously applied ethylene, 653
modification, joint action of O_3 and SO_2, pea, 401
photosynthetic, developmental changes, celery, 307
Gelidium coulteri, regulation of carbon flow, nitrogen and light, 136
Genes
cell-specific expression, corn, 613
expression, developing wheat endosperm, 34
regulation of expression, corn embryos, 543
Sorghum bicolor
genetic regulation of development, GA_1 genotypes, 581
maturity, genetic regulation of development, 575
Germination
regulation of gene expression, corn embryos, 543
soybean, glycinin and β-conglycinin, differential proteolysis, 71
Gibberellic acid
apple dwarfing interstocks, 1090
barley aleurone layers, nuclease secretion, 801
enhanced sucrose export, source leaves, broad beans, 962
IAA-induced sensitivity, α-amylase production, dwarf wheat aleurone, 685
responsiveness, IAA and low temperature, dwarf wheat aleurone, 688
Sorghum bicolor, genetic regulation of development, 581
Gibberellin A_{20}, 3β-hydroxylation, phytochrome regulation in shoots, dwarf pea, 909
Gibberellins
identification, *Sorghum*, 330
metabolism
cell-free extracts, spinach leaves, 190
soybean cotyledons, 241
paclobutrazol translocation, apple seedlings, 11
suspensors, *Phaseolus coccineus* seeds, 298
Gingko bioloba, proanthocyanidins, in leaves and cultures, 1132
GlcNAc-1-P-transferase, solubilization, soybean cells, 748
Gliadins, gene expression, developing wheat endosperm, 34
Globulins, synthesis, maize embryos, 1069
Glomus deserticola, VA mycorrhizal and nonmycorrhizal rose plants, osmotic adjustment in leaves, drought stress, 765
Glomus intraradices, VA mycorrhizal and nonmycorrhizal rose plants, osmotic adjustment in leaves, drought stress, 765
β-Glucan synthase, regulation of plasma membrane, phospholipids, red beet root, 396
Glucose, oxidation, enzymes of, leaf tissues, 503
Glutamine, transport pathway, grain filling in wheat, 1019
Glutamine synthetases, immunochemical comparison, Solanaceae plants, 585
Glutathione, effect of heat shock on metabolism, maize roots, 1031
Glutathione reductase
lipid peroxidation, higher plants, 700
pea chloroplast, purification and characterization, 351
Glycerol, inorganic ions and, osmoregulatory responses, *Chlamydomonas pulsatilla*, 406
Glycine max (*see* Soybean)
Glycinin, β-conglycinin and, differential proteolysis, soybean germination and growth, 71
Glycolate, metabolism and excretion, *Chlamydomonas reinhardtii*, 813
Glyphosate
atrazine and, apoplastic and symplastic pathways, shoots of seedling sunflower, 1000
inhibited photosynthesis, carbon to starch, beet leaves, 468
Gossypium hirsutum (*see* Cotton)
Grain filling
wheat
accumulation and conversion of sugars, 1024
amino acid composition, transport pathway, 1019
Grapefruit, putrescine accumulation, chilling injury, 324
Gravitropism, higher plant shoots, ethylene, 534
Gravity, influence on amyloplast formation, corn columella cells, 864
Growth medium, membrane fatty acid composition, system for manipulation, soybean cell cultures, 771
GSH (*see* Glutathione)
Guard cells, chloroplasts, mesophyll and, state changes of *Saxifraga cernua*, 873

H

Harvest index, potato, growth and analysis of genotypes, 103
H^+-ATPase, plasma membrane, fusicoccin stimulation, radish, 121
Heat shock, effect on metabolism of glutathione, maize roots, 1031
Helianthus annuus (*see* Sunflower)
Hexadecatrienoate, exogenous palmitate, spinach chloroplast utilization, 357
Homoserine, synthesis, role of transamination, peas, 99
sym-Homospermidine, canavalmine and, distribution and metabolism, sword bean, 795
Hordeum vulgare (*see* Barley)
Hybrids, *Flaveria*, C_4 and C_3-C_4 species, photosynthesis, 211
Hydrogen
fermentative metabolism, *Chlamydomonas reinhardtii*, 160
oxygen isotope ratios, photosynthetic tissues, CAM and C_3 plants, 428
Hydrogenase
acetylene reduction, nodulated peas, 154
uptake, sodium stimulation, symbiotic *Rhizobium*, 494
Hydrogen peroxide, metabolism, leaves and root nodules, *Medicago sativa*, 1169
Hydroxamate, stimulated oxygen uptake, peroxidase mediation, pea and corn roots, 236
Hydroxycinnamic acid amide, K-nutrition and growth bud formation, tobacco leaf explants, 561
Hydroxylamine, nitrate reductase, reversible inactivation, *Ankistrodesmus braunii*, 65
3β-Hydroxylation, gibberellin A_{20} to A_1, phytochrome regulation, shoots of dwarf pea, 909
3-Hydroxy-3-methylglutaryl, coenzyme A reductase activity, *Ochromonas malhamensis*, 523
Hypocotyls
Diageotropica tomato, auxin insensitivity, 713
zucchini, calcium uptake, endoplasmic reticulum, 47

I

IAA (*see* Indole-3-acetic acid)
Immunochemistry, second antigenic domain, oat phytochrome, photoconversion, 109
Immunosorbent assay, enzyme-linked, regulation of nitrate reductase activity, spinach cells, 739
Indole-3-acetic acid
endogenous auxin and ethylene, lichen *Ramalina duriaei*, 1122
GA_3 responsiveness
α-amylase production, dwarf wheat aleurone, 685
phospholipid control and low temperature, dwarf wheat aleurone, 688
rooting cofactor activity, phytoalexins, 864
Ipomea tricolor, source leaves, symplastic transport, 432
Iron, stress response, rhizodermal transfer cells, pepper, 511
Isoelectric focusing, oat root membranes, 327
Isoleucine, adaptation of plant cells to water stress, metabolic changes, tomato, 890
Isozymes
3-deoxy-D-*arabino*-heptulosonate 7-phosphate synthase, *Nicotiana silvestris*, 203
lactate dehydrogenase, oxygen deficit, barley root tissue, 658

K

Kernel, developing wheat endosperms, sucrose synthase activity, 7

L

Lactate dehydrogenase
hypoxically induced, purification and properties, barley roots, 664
isozyme induction, oxygen deficit, barley root tissue, 658
Lamella, xyloglucan and rhamnogalacturonan I, immunogold localization, sycamore cells, 787
Leaf
apple seedling, paclobutrazol translocation, 11
barley, photosynthetic sucrose synthesis, 15

beet, carbon to starch, glyphosate-inhibited photosynthesis, 468
broad bean, enhanced sucrose export, gibberellic acid, 962
cabbage, wilted, turgor recovery without water uptake, 147
Cassia fasciculata, metabolic inhibitors, 270
cereal, polyamine metabolism and osmotic stress, protoplast viability, 369
clover, copper nutrition, biosynthesis of diamine oxidase, 1126
corn
carotenoid-deficient, chloroplast protein photooxidation, 760
mannose metabolism, 1081
phosphoenolpyruvate carboxylase, *in vitro* phosphorylation, 1107
phosphoenolpyruvate carboxylase, light modulation, 550
cotton, nonsenescing, cytokinin-induced ethylene synthesis, 930
Ipomea tricolor, symplastic transport, 432
Medicago sativa, hydrogen peroxide metabolism, 1169
morphology, near-isogenic cotton lines, canopy photosynthesis, 635
Phaseolus vulgaris stomata, photocontrol, dark circadian rhythms, 28
proanthocyanidins, *Ginkgo bioloba*, *Pseudotsuga menziesii* and *Ribes sanguineum*, 1132
rose, osmotic adjustment, response to drought stress, 765
soybean, potassium cyanide and salicylhydroxamic acid, effects on respiration, 443
species variation, predawn inhibition, ribulose-1,5-bisphosphate carboxylase/oxygenase, 1161
spinach
cell-free extracts, gibberellin metabolism, 190
esterolytic properties, leucine-proteinase, 591
exogenous palmitate desaturation, hexadecatrienoate, 357
rubisco activation, 967
sunflower
atrazine and glyphosate, apoplastic and symplastic pathways, 1000
sampling method, apoplastic and membrane-filtered symplastic sap, 995
tissues, enzymes of glucose oxidation, 503
tobacco
K-nutrition, hydroxycinnamic acid amide, 561
photosynthetic response to water stress, photoacoustic methods, 834
photosynthetic response to water stress, photoacoustics, 827
tobacco discs, enhanced development of ethylene forming enzyme, carbon dioxide, 925
Vicia faba, adaxial and abaxial stomata, responses to light, 384
Welwitschia mirabilis, stomatal components, gas exchange, 173
wheat, C_4 pathway enzymes, variation in amounts, 96
Lectins, from meadow saffron, 1036
Lemna minor, amino acid metabolism, responses to methionine sulfoximine, 1057
Lemna paucicostata, phosphoethanolamine bases, phosphatidylcholine synthesis, 126
Lemons, putrescine accumulation, chilling injury, 324
Leucine-proteinase, esterolytic properties, spinach leaves, 591
Lichens, *Ramalina duriaei*, endogenous auxin and ethylene, 1122
Light
blue, anthocyanin production, tomato and cabbage, 952
modulation, phosphoenolpyruvate carboxylase, corn leaf, 550
normal and inverted *Vicia faba* leaves, adaxial and abaxial stomata responses, 384
photosystem I or II, cyanobacterial acclimation, *Synechococcus*, 185
regulation of carbon flow, *Gelidium coulteri*, 136
temperature and, phosphoenolpyruvate carboxylase, *Amaranthus paniculatus*, 518
weak, water-oxidizing enzyme, wheat, 261
Light-harvesting complex, chlorophyll *a/b*-proteins, chloroplast import, amino termini and transit peptides, 1172
Lilium longiflorum, calcium-activated phytase, pollen, 333
Lipids
body membranes, ATPase, castor bean endosperm, 671
peroxidation, role of glutathione reductase, higher plants, 700
plasma membranes and tonoplasts, mung bean seedlings, 807
Liposomes, pH-sensitive, plant protoplasts, improved cytoplasmic delivery, 179
Lipoxygenases, developing soybean seeds, 1135

M

Magnesium-2,4-divinylpheoporphyrin a_5, regeneration, cucumber chloroplasts, 285
Magnetic resonance imaging, changing water content, *Pelargonium hortorum* roots, 1158
Maize (*see* Corn)
Malate, inhibition, phosphoenolpyruvate carboxylase, *Crassula argentea*, 985
Mango, fruitlets, abscission, enhanced ethylene biosynthesis, 991
Mannose, metabolism in corn, photosynthesis and fluorescence, 1081
Meadow saffron, new lectin, 1036
Medicago sativa, hydrogen peroxide metabolism, leaves and root nodules, 1169
Medicago sativa (*see* Alfalfa)
Membrane
fatty acid composition, system for manipulation, soybean cell cultures, 771
lipid body, ATPase, castor bean endosperm, 671
potentials, compatible and incompatible rhizobia, soybean root cells, 1115
Mesophyll cells
guard-cell chloroplasts and, state changes, *Saxifraga cernua*, 873
leaf tissues, enzymes of glucose oxidation, 503
Methionine, stem infusions, soybean storage content, 1013
Methionine sulfoximine, amino acid metabolism of *Lemna minor*, 1057
Microsomal membranes, pea, biosynthesis, fucose-containing xylogucan nonasaccharide, 379
Microtubules, actin filaments and, organelle movements, characean algae, 631
Minerals, nutrient requirements of cell suspension culture, loblolly pine, 942
Mitochondria
alternative oxidase, characterization, voodoo lilies, 1
wheat, water stress and ion transport, 936
Monoclonal antibodies
second antigenic domain, oat phytochrome, photoconversion, 109
water oxidation complex, *Chlamydomonas*, 114
Mung bean, lipids of plasma membranes and tonoplasts, 807

N

NADH, acetoacetyl-CoA reductase, *Euglena gracilis*, 978
NADH:Nitrate reductase, properties of bromphenol blue, electron donor, higher plants, 729
NADP-malate dehydrogenase, light activation, mesophyll protoplasts, corn, 312
Nicotiana alata, arabinogalactan-proteins, female sexual tissue, 885
Nicotiana silvestris, 3-deoxy-D-*arabino*-heptulosonate 7-phosphate synthase, two-isozyme system, 203
Nicotiana tabacum (*see* Tobacco)
Nicotine alkaloid, biosynthesis, trichomes, tobacco, 479
Nitrate
ammonium and, photosynthetic suppression, N-limited *Selenastrum minutum*, 708
reduction, roots and shoots, barley and corn seedlings, 254
Nitrate reductase
assay, nitric oxide and nitrous oxide production, soybean and winged bean, 718
hydroxylamine, reversible inactivation, *Ankistrodesmus braunii*, 65
intercellular localization, corn roots, 675
NADH, properties of bromphenol blue, higher plants, 729
NADH and NAD(P)H, genetic variants, regenerating callus of maize, 473
regulation, spinach cells, enzyme-linked immunosorbent assay, 739
Nitric oxide, nitrous oxide and, production during nitrate reductase assay, soybean and winged bean, 718
Nitrite, uptake and reduction, kinetic characterization, *Chlamydomonas reinhardtii*, 904
Nitrogen
adaptation of plant cells to water stress, metabolic changes, tomato, 890
ammonium as source, utilization, soybean, 54
metabolism, effect of tabtoxinine-β-lactam, oat roots, 1045
nutrition and xylem sap composition, peanut, 946
regulation of carbon flow, *Gelidium coulteri*, 136
salinity effects and, ribulose-1,5-bisphosphate carboxylase, bean, 555

stress, photosynthesis in leaves, cotton, 869
uptake, wheat seedling, 1051
uptake and redistribution, reproductive growth, maize, 247
Nitrous oxide, nitric oxide and, production during nitrate reductase assay, soybean and winged bean, 718
Nuclear magnetic resonance, carbohydrate turnover, salt shock-induced, marine cyanobacterium, 646
Nuclease, secretion in response to gibberellic acid, barley aleurone layers, 801

O

Oat
leaf, putrescine accumulation, cadmium-induced, 641
phytochrome, photoconversion, second antigenic domain, 109
protoplasts, improvement, arginine decarboxylase inhibitor, 375
root
isoelectric focusing, 327
tabtoxinine-β-lactam, effect on nitrogen metabolism, 1045
Ochromonas malhamensis, 3-hydroxy-3-methylglutaryl, coenzyme A reductase activity, 523
Oil, diacylglycerol acyltransferase, maturing oil seeds, maize and other species, 813
Onion, bulb cells, protoplasmic swelling, symptom of freezing injury, 625
Opine, synthesis, wild-type plant tissue, soybean/cotton/tobacco, 218
Orange
abscisic acid levels, developing floral organs, 1164
developing and mature, occurrence of abscisic acid and abscisyl-β-D-glucopyranoside, 339
Organelle movements, actin filaments, microtubules, characean algae, 631
Organic acid, carbohydrate compositions, effects of water stress, cotton plants, 724
Orthophosphate dikinase, variation in amounts, other C_4 pathway enzymes, wheat, 96
Oryza sativa (*see* Rice)
Osmolality, glycerol and inorganic ions, *Chlamydomonas pulsatilla*, 406
Osmosis, adjustment in leaves, VA mycorrhizal and nonmycorrhizal rose plants, drought stress, 765
Osmotic stress
carbon metabolism, *Chlamydomonas reinhardtii*, 594
polyamine metabolism and
oat protoplast improvement, arginine decarboxylase inhibitor, 375
protoplast viability, various plants, 369
Osmoticum, potassium and solutes, growth zone, primary corn root, 853
Oxygen
deficit
lactate dehydrogenase, barley roots, 664
lactate dehydrogenase isozymes, barley root tissue, 658
hydrogen isotope ratios, photosynthetic tissues, CAM and C_3 plants, 428
hydroxamate-stimulated uptake, peroxidase mediation, pea and corn roots, 236
isotope exchange, metabolites and water, cellulose synthesis, 423
Ozone, SO_2 and, gas exchange modification, pea, 401

P

Paclobutrazol, translocation, apple seedlings, 11
Palmitate, exogenous, hexadecaatrienoate, spinach chloroplast utilization, 357
Partitioning
maize reproductive growth, nitrogen uptake and redistribution, 247
potato, growth and analysis of genotypes, 103
Pea
chloroplasts
glutathione reductase, purification and characterization, 351
photosynthesis, effects of sulfite and arsenite, 488
dwarf, phytochrome regulation in shoots, gibberellin A_{20} 3β-hydroxylation, 909
effects of fructose 2,6-bisphosphate, phosphoglucomutase, 619
gas exchange modification, O_3 and SO_2, 401
hydrogenase uptake, sodium stimulation, symbiotic *Rhizobium*, 494
microsomal membranes, biosynthesis, fucose-containing xylogucan nonasaccharide, 379
nuclei, protein phosphorylation, polyamine stimulation, 681
protoplasts, exoamylase activity, vacuoles, 1119
Rhizobium leguminosarum symbioses, H_2 evolution, acetylene reduction, 154
roots, hydroxamate-stimulated O_2 uptake, peroxidase mediation, 236
seedlings, ethylene inhibition, polyamine biosynthetic enzymes, 607
transamination, role in homoserine synthesis, 99
xyloglucan and cellulose, 301
Peanut
maturing oil seeds, diacylglycerol acyltransferase, 813
xylem transport of nitrogen, 946
Pectate lyase, induced plasmalemma K^+/H^+ exchange, tobacco, 142
Pelargonium hortorum, root, changing water content, magnetic resonance microscopy, 1158
Peltigera rufescens
fructose-1,6-biphosphatase
seasonal changes, kinetic parameters, 457
two hydrolyzing enzymes, 462
Peppers
putrescine accumulation, chilling injury, 324
rhizodermal transfer cells, iron stress response, 511
Peptides, transit, chloroplast import, light-harvesting chlorophyll *a*/*b*-proteins, 1172
Peroxidase, mediation, hydroxamate-stimulated oxygen uptake, pea and corn roots, 236
pH
cell sap, fusicoccin and potassium, corn, 316
cytoplasmic regulation, *Acer pseudoplatanus* cells, 840, 846
sensitive liposomes, improved cytoplasmic delivery, plant protoplasts, 179
spinach, ribulose 1,5-bisphosphate carboxylase, air level CO_2, 77
Phaseolus coccineus, seeds, gibberellins in suspensors, 298
Phaseolus vulgaris (*see* Bean)
Phloem, xylem and, polyamine presence and identification, various plants, 1154
Phosphate, nutrition during seed development, soybean, 1008
Phosphatidylcholine, synthesis, phosphoethanolamine bases, *Lemna paucicostata*, 126
Phosphoenolpyruvate carboxylase
C_4 pathway enzymes, variation in amounts, wheat, 96
in vitro phosphorylation, maize leaf, 1107
kinetic properties, C_4 photosynthesis, *Flaveria*, 695
light and temperature effects, *Amaranthus paniculatus*, 518
light modulation, corn leaf, 550
malate inhibition, *Crassula argentea*, 985
Phosphoethanolamine bases, phosphatidylcholine synthesis, *Lemna paucicostata*, 126
Phosphoglucomutase, effects of fructose 2,6-bisphosphate, pea/string-bean/potato, 619
Phospholipids
regulation of plasma membrane, β-glucan synthase, red beet root, 396
water stress and ion transport, wheat mitochondria, 936
Phosphorus, stress, photosynthesis in leaves, cotton, 869
Phosphorylation
phosphoenolpyruvate, maize leaf, 1107
protein, polyamine stimulation, pea nuclei, 681
Photoacoustics, photosynthetic responses of leaves, water stress, tobacco, 827
Photoactivation, water-oxidizing enzyme, wheat, 261
Photoconversion, comparison of spectral properties, phytochromes, different preparations, 956
Photooxidation, fate of chloroplast proteins, carotenoid-deficient maize leaves, 760
Photosynthesis
canopy, plant productivity, leaf morphology in cotton lines, 635
C_3-C_4 *Flaveria* species, phosphoenolpyruvate carboxylase, kinetic properties, 695
effects of sulfite and arsenite, pea chloroplasts, 488
F_1 hybrids, C_4 and C_3-C_4 species, *Flaveria linearis*, 211
fluorescence and, mannose metabolism, corn, 1081
glyphosate inhibition, carbon to starch, beet leaves, 468
growth and, carbon dioxide enrichment, water hyacinth, 528
leaves, carbon accumulation, nitrogen- and phosphorus-stressed cotton, 869
low water potential, sunflower, 90
net, foliar gas exchange, response to ethylene, 653
nitrate and ammonium induced suppression, N-limited *Selenastrum minutum*, 708
postillumination CO_2 assimilation, response to lightflecks, *Alocasia macror-*

rhiza, 1063
response of leaves to water stress, photoacoustics and related methods, tobacco, 827, 834
salinity and nitrogen effects, ribulose-1,5-bisphosphate carboxylase, bean, 555
sucrose-phosphate synthase, barley primary leaves, 15
Photosystem I, cyanobacterial acclimation, Synechococcus, 185
Photosystem II
cyanobacterial acclimation, *Synechococcus*, 185
developmental loss of activity, chloroplast-encoded tobacco mutant, 19
water oxidation complex, *Chlamydomonas*, 114
Phytase, calcium-activated, pollen, *Lilium longiflorum*, 333
Phytoalexins
ayapin and scopoletin, metabolism, sunflower, 167
rooting cofactor activity, 864
Phytochrome
comparison of spectral properties, different preparations, 956
cryptochrome and anthocyanin production, photoregulation under blue light, tomato and cabbage, 952
oat, photoconversion, second antigenic domain, 109
Phaseolus vulgaris stomata, photocontrol, dark circadian rhythms, 28
regulation of gibberellin A_{20} 3β-hydroxylation, shoots, dwarf pea, 909
Picea abies, antioxidant production, SO_2 and O_3, 336
Pi dikinase, light activation, mesophyll protoplasts, corn, 312
Pigment, biosynthesis, effects of gabaculine, *Anacystis nidulans*, 280
Pineapple, electrophoretic analysis, protoplast, vacuole and tonoplast, 916
Pine, loblolly, cell suspension culture, mineral nutrient requirements, 942
Pinus taeda (*see* Pine, loblolly)
Pistil, female sexual tissue, arabinogalactan-proteins, *Nicotiana alata*, 885
Pisum sativum (*see* Pea)
Plant cells, adaptation to water stress, metabolic changes, tomato, 890
Plasmalemma, K^+/H^+ exchange, induced by pectate lyase, tobacco, 142
Plasma membrane
electrical parameters, cytoplasmic K^+ concentration, *Chara corallina*, 417
β-glucan synthase regulation, phospholipids, red beet root, 396
H^+-ATPase, fusicoccin stimulation, radish, 121
tonoplasts and, lipid composition, mung bean seedlings, 807
Plastids, tomato, restriction enzyme analysis, 1145
Pollen, calcium-activated phytase, *Lilium longiflorum*, 333
Pollination, female sexual tissue, arabinogalactan-proteins, *Nicotiana alata*, 885
Polyamines
inhibited biosynthesis, control of bean rust fungus, 485
metabolism
osmotic stress, oat, 375
osmotic stress, protoplast viability of various plants, 369
presence and identification, xylem and phloem exudates, various plants, 1154
Polyols, photosynthetic gas exchange, developmental changes, celery, 307
Polypeptides
glycinin and β-conglycinin, differential proteolysis, soybean germination and seedling growth, 71
regulation of gene expression, corn embryos, 543
Potassium
cytoplasmic concentration, plasma membrane electrical parameters, *Chara corallina*, 417
nutrition, amine and hydroxycinnamic acid amide, tobacco leaf explants, 561
solutes and, growth zone, primary corn root, 853
Potassium cyanide, salicylhydroxamic acid and, effects on respiration, soybean leaves, 443
Potassium-hydrogen exchange, plasmalemma, induced by pectate lyase, tobacco, 142
Potato
3-deoxy-D-*arabino*-heptulosonate 7-phosphate synthase, 1040
effects of fructose 2,6-bisphosphate, phosphoglucomutase, 619
growth and analysis of genotypes, 103
tubers, identification, granule-bound starch synthase, 411
Proanthocyanidins, in leaves and cultures, 1132
Proline, accumulation, inhibition, barley leaves, 703
Proplastids, chloroplasts and, synthesis and turnover of protein, *Euglena gracilis*, 972
Protein
chloroplast, photooxidation, carotenoid-deficient maize leaves, 760
phosphorylation, polyamine stimulation, pea nuclei, 681
soybean storage, methionine content, stem infusions, 1013
synthesis, low temperature treatment, rapeseed seedlings, 733
synthesis and turnover, proplastids and chloroplasts, *Euglena gracilis*, 972
Proteolysis, glycinin and β-conglycinin, soybean germination and seedling growth, 71
Protoplasm, swelling, symptom of freezing injury, onion bulb cells, 625
Protoplasts
barley aleurone, development, calcium-stimulated α-amylase secretion, 566
cytoplasmic delivery, pH-sensitive liposomes, 179
mesophyll, corn, photosynthetic enzymes, 312
oat, polyamine metabolism and osmotic stress, 375
pea, xyloglucan and cellulose, 301
pea and wheat leaf, exoamylase activity, vacuoles, 1119
vacuole and tonoplast vesicle proteins, electrophoretic analysis, CAM plants, 916
viability, polyamine metabolism and osmotic stress, various plants, 369
Pseudomonas savastanoi, cytokinin production, 742
Pseudomonas syringae, induced plasmalemma K^+/H^+ exchange, tobacco, 142
Pseudotsuga menziesii, proanthocyanidins, in leaves and cultures, 1132
Putrescine
accumulation, chilling injury, lemons/grapefruit/peppers, 324
cadmium-induced accumulation, oat and bean leaves, 641
Pyruvate
light activation, mesophyll protoplasts, corn, 312
variation in amounts, other C_4 pathway enzymes, wheat, 96

Q

Quercus alba (*see* White oak)

R

Radish, plasma membrane H^+-ATPase, fusicoccin stimulation, 121
Ramalina duriaei, endogenous auxin and ethylene, 1122
Rapeseed, seedlings, changes in protein synthesis, low temperature treatment, 733
Raphanus sativus (*see* Radish)
Red algae (*see Gelidium coulteri*)
Red beet, root, phospholipids, regulation of plasma membrane β-glucan synthase, 396
Red blood cells (*see* Erythrocytes)
Rehydration, enzyme dynamics, *Selaginella lepidophylla*, 61
Respiration, potassium cyanide and salicylhydroxamic acid, soybean leaves at different ages, 443
Resurrection plants, *Selaginella lepidophylla*, enzyme dynamics, during rehydration, 61
Rhamnogalacturonan I, xyloglucan and, immunogold localization, sycamore cells, 787
Rhizobia, compatible and incompatible, membrane potentials, soybean root cells, 1115
Rhizobium
sodium stimulation, hydrogenase uptake, pea, 494
soybean-nodule symbiosis, regulation, shoot and root factors, 588
Rhizobium leguminosarum, pea symbioses, H_2 evolution, acetylene reduction, 154
Rhizodermal transfer cells, iron stress response, pepper, 511
Ribes sanguineum, proanthocyanidins, in leaves and cultures, 1132
Ribonucleic acid, δ-aminolevulinic acid formation, stimulation, algal extracts, 1096
Ribosylzeatin, zeatin and ribosyl-1''-methylzeatin, secretion, *Pseudomonas savastanoi*, 742
Ribulose-1,5-bisphosphate carboxylase
air level CO_2, effects of pH, spinach, 77
salinity and nitrogen effects, metabolite pool sizes, bean, 555
Ribulose 1,6-bisphosphate carboxylase, rapeseed seedlings, changes in protein synthesis, low temperature treatment, 733
Ribulosebisphosphate carboxylase/oxygenase (*see* Rubisco)
Rice, seed scutellum, R-type α-amylase molecules, high temperatures, 880
Ricinus communis (*see* Castor bean)

RNA (*see* Ribonucleic acid)
Root
alfalfa nodules, asparagine biosynthesis, 390
apple seedling, paclobutrazol translocation, 11
barley
lactate dehydrogenase isozymes, oxygen deficit, 658
lactate dehydrogenase, hypoxically induced, 664
seedling, nitrate reduction, 254
corn
growth zone, potassium and solutes, 853
heat shock, metabolism of glutathione, 1031
hydroxamate-stimulated O_2 uptake, peroxidase mediation, 236
nitrate reductase, intercellular localization, 675
seedling, nitrate reduction, 254
cotton, cell enlargement and production, effects of NaCl and $CaCl_2$, 1102
Medicago sativa, hydrogen peroxide metabolism, 1169
nodulated peas, H_2 evolution, acetylene reduction, 154
oat, tabtoxinine-β-lactam, effect on nitrogen metabolism, 1045
oat membranes, isoelectric focusing, 327
pea, hydroxamate-stimulated O_2 uptake, peroxidase mediation, 236
Pelargonium hortorum, magnetic resonance microscopy, changing water content, 1158
Phaseolus vulgaris, effects of calcium, amino acid transport, 41
red beet, phospholipids, regulation of plasma membrane β-glucan synthase, 396
rooting cofactor activity, phytoalexins, 864
soybean
compatible and incompatible rhizobia, membrane potentials, 1115
nodules, dark-induced senescence and bacteroid stability, 346
Rhizobium nodule symbiosis, regulation, 588
white oak seedlings, nutrient-poor soil, atmospheric CO_2 enrichment, 83
Rosa hybrida (*see* Rose)
Rose, leaf, osmotic adjustment, response to drought stress, 765
Rubisco, predawn inhibition, species variation, 1161
Rubisco activase, physiological CO_2 and ribulosebisphosphate concentrations, rubisco activation, spinach, 967

S

Salicylhydroxamic acid, potassium cyanide and, effects on respiration, soybean leaves, 443
Salinity, nitrogen effects and, ribulose-1,5-bisphosphate carboxylase, bean, 555
Salt
ABA and proline accumulations, inhibition, barley leaves, 703
shock, carbohydrate turnover, marine cyanobacterium, 646
Sap, apoplastic and membrane-filtered symplastic, sampling method, sunflower leaves, 995
Sauromatum guttatum (*see* Voodoo lilies)
Saxifraga cernua, kinetics of *in vivo* state transitions, mesophyll and guard cell chloroplasts, 873
Scopoletin, ayapin and, metabolism, sunflower, 167
Scutellum, rice seed, high temperatures, secretion of R-type α-amylase, 880
Sedum telephium, electrophoretic analysis, protoplast, vacuole and tonoplast, 916
Seed
oil, maize and other species, diacylglycerol acyltransferase, 813
Phaseolus coccineus, gibberellins in suspensors, 298
soybean
development, P nutrition, 1008
glycinin and β-conglycinin, differential proteolysis, 71
lipoxygenases, 1135
maturation, assimilate uptake, 222
storage protein, methionine content, 1013
trytophan metabolite transport, 454
sword bean, sym-homospermidine and canavalmine, distribution and metabolism, 795
Seedling
apple, paclobutrazol translocation, 11
barley, nitrate reduction, roots and shoots, 254
cabbage, cryptochrome, phytochrome and anthocyanin synthesis under blue light, 952
corn
anaerobic aldolase DNA, 1076
nitrate reduction, roots and shoots, 254
mung bean, lipid composition, plasma membranes and tonoplasts, 807
pea, ethylene inhibition, polyamine biosynthetic enzymes, 607
rice, scutella at high temperatures, α-amylase biosynthesis, 880
soybean, glycinin and β-conglycinin, differential proteolysis, 71
sunflower, atrazine and glyphosate, apoplastic and symplastic pathways, 1000
tobacco, cadmium accumulation, tissue distribution, 274
tomato, cryptochrome, phytochrome and anthocyanin synthesis under blue light, 952
wheat, uptake of nitrogen species, 1051
white oak, nutrient-poor soil, atmospheric CO_2 enrichment, 83
Selaginella lepidophylla, enzyme dynamics, during rehydration, 61
Selenastrum minutum, N-limited, photosynthetic suppression, nitrate and ammonium induced, 708
Senescence
dark-induced, bacteroid stability, soybean root nodules, 346
P nutrition during seed development, soybean, 1008
Shoot
barley, seedling, nitrate reduction, 254
corn, seedling, nitrate reduction, 254
higher plants, gravitropism, ethylene, 534
pea
phytochrome regulation, gibberellin A_{20} 3β-hydroxylation, 909
role of transamination, homoserine synthesis, 99
Sorghum bicolor, gibberellin identification, 330
soybean, *Rhizobium* nodule symbiosis, regulation, 588
sunflower, atrazine and glyphosate, apoplastic and symplastic pathways, 1000
Sodium, stimulation of hydrogenase uptake, symbiotic *Rhizobium*, 494
Sodium chloride, calcium chloride and, cell enlargement and production, cotton roots, 1102
Soil, nutrient-poor, atmospheric CO_2 enrichment, white oak seedlings, 83
Solanaceae plants, glutamine synthetases, immunochemical comparison, 585
Solanum acaule (*see* Potato)
Solanum tuberosum (*see* Potato)
Sorghum bicolor
genetic regulation of development
GA_1 genotypes, 581
role of maturity genes, 575
gibberellin identification, 330
Soybean
ammonium as nitrogen source, utilization, 54
cotyledons, gibberellin metabolism, 241
germination and seedling growth, glycinin and β-conglycinin, differential proteolysis, 71
GlcNAc-1-P-transferase, solubilization, 748
leaves, potassium cyanide and salicylhydroxamic acid, effects on respiration, 443
maturing oil seeds, diacylglycerol acyltransferase, 813
membrane fatty acid composition, system for manipulation, 771
nitric oxide and nitrous oxide production, during nitrate reductase assay, 718
P nutrition during seed development, 1008
Rhizobium nodule symbiosis, regulation, shoot and root factors, 588
root
compatible and incompatible rhizobia, membrane potentials, 1115
dark-induced senescence, bacteroid stability, 346
seeds
lipoxygenases, 1135
maturation, assimilate uptake, 222
transport of trytophan metabolites, 454
storage protein, methionine content, stem infusions, 1013
tween-fatty acid esters, metabolism, 780
wild-type plant tissue opine synthesis, 218
Spadix, voodoo lily mitochondria, alternative oxidase, characterization, 1
Spermine, protein phosphorylation, pea nuclei, 681
Spinach
chloroplasts, betaine aldehyde oxidation, 753
effects of pH, ribulose-1,5-bisphosphate carboxylase, air level CO_2, 77
fatty acid metabolism, acyl carrier protein, isoform activity, 448
leaves
cell-free extracts, gibberellin metabolism, 190
esterolytic properties, leucine-proteinase, 591
exogenous palmitate desaturation, hexadecatrienoate, 357
nitrate reductase activity, enzyme-linked immunosorbent assay, 739
rubisco activation, physiological CO_2 and

ribulosebisphosphate concentrations, 967
Spinacia oleracea (*see* Spinach)
Spores, germination, gametophyte development, *Anemia mexicana* and *A. phyllitidis*, 230
Starch, glyphosate-inhibited photosynthesis, beet leaves, 468
Starch synthase, granule-bound, identification, potato tubers, 411
Stele, nitrate reductase, intercellular localization, corn roots, 675
Stem
apple seedling, paclobutrazol translocation, 11
sunflower, ayapin and scopoletin, metabolism, 167
Steviol, gibberellin A_{20} 3β-hydroxylation, phytochrome regulation, shoots of dwarf pea, 909
Stomata
adaxial and abaxial, responses to light, *Vicia faba* normal and inverted leaves, 384
foliar gas exchange, exogenously applied ethylene, 653
Phaseolus vulgaris, photocontrol, dark circadian rhythms, 28
Welwitschia mirabilis leaves, stomatal components, gas exchange, 173
String-bean, effects of fructose 2,6-bisphosphate, phosphoglucomutase, 619
Style, female sexual tissue, arabinogalactan-proteins, *Nicotiana alata*, 885
Sucrose
assimilate uptake, maturing soybean seeds, 222
enhanced export from source leaves, gibberellic acid, broad beans, 962
photosynthetic synthesis, barley primary leaves, 15
Sucrose synthase, activity, developing wheat endosperms, 7
Sugar beet, taproot, turgor inhibition of proton extrusion, 1148
Sulfate, sulfite and arsenite, effects on photosynthesis, pea chloroplasts, 488
Sulfite, arsenite and, effects on photosynthesis, pea chloroplasts, 488
Sulfur dioxide
O_3 and, gas exchange modification, pea, 401
ozone and, production of antioxidants, conifers, 336
Sunflower
leaf, sampling method, apoplastic and membrane-filtered symplastic sap, 995
photosynthesis, low water potential, 90
phytoalexins ayapin and scopoletin, metabolism, 167
seedling shoots, atrazine and glyphosate, apoplastic and symplastic pathways, 1000
Suspensors, gibberellins, *Phaseolus coccineus* seeds, 298
Sword bean, sym-homospermidine and canavalmine, distribution and metabolism, 795
Sycamore, xyloglucan and rhamnogalacturonan I, immunogold localization, 787
Symplasm, growth and transport, 1153
Symplast, transport, *Ipomea tricolor* source leaves, 432
Synechococcus, cyanobacterial acclimation, photosystem I or II light, 185

T

Tabtoxinine-β-lactam, effect on nitrogen metabolism, oat roots, 1045
Taproot, sugar beet, turgor inhibition of proton extrusion, 1148
Temperature
high, rice seed scutellum, secretion of R-type α-amylase, 880
light and, phosphoenolpyruvate carboxylase, *Amaranthus paniculatus*, 518
low
GA_3 responsiveness, dwarf wheat aleurone, 688
IAA-induced GA_3 sensitivity, dwarf wheat aleurone, 685
protein synthesis, rapeseed seedlings, 733
Thidiazuron, nonsenescing cotton leaves, cytokinin-induced ethylene synthesis, 930
Thylakoid membranes
cyanobacterial ferredoxin-$NADP^+$ oxidoreductase, *Anabaena*, 499
tobacco mutant, photosystem II activity, developmental loss, 19
Tissues, leaf, enzymes of glucose oxidation, 503
Tobacco
cadmium, variation in accumulation, tissue distribution, 274
K-nutrition and bud growth formation, amine and hydroxycinnamic acid amide, leaf explants, 561
leaf
enhanced development of ethylene forming enzyme, carbon dioxide, 925
photosynthetic responses to water stress, photoacoutic methods, 834
photosynthetic responses to water stress, photoacoustic methods, 827
Lutescens-1 mutant, photosystem II activity, developmental loss, 19
plasmalemma K^+/H^+ exchange, induced by pectate lyase, 142
trichomes, nicotine alkaloid biosynthesis, 479
wild-type plant tissue, opine synthesis, 218
Tomato
adaptation of plant cells to water stress, metabolic changes, 890
anthocyanin production, photoregulation under blue light, 952
chloroplast and chromoplast DNA, restriction enzyme analysis, 1145
Diageotropica, auxin insensitivity, 713
Tonoplast vesicles
plasma membranes and, lipid composition, mung bean seedlings, 807
protoplast and vacuole, electrophoretic analysis, CAM plants, 916
Transamination, role in homoserine synthesis, peas, 99
Triazine, resistant and susceptible isolines, characterization, canola, 859
Trichomes, nicotine alkaloid biosynthesis, tobacco, 479
Trifolium repens (*see* White clover)
Triticum aestivum (*see* Wheat)
Triticum boeoticum (*see* Wheat)
Triticum monococcum (*see* Wheat)
Trytophan, metabolite transport, soybean seeds, 454
Tunicamycin, GlcNAc-1-P-transferase, solubilization, soybean cells, 748
Turgor
inhibition, proton extrusion, sugar beet taproot, 1148
recovery, wilted cabbage leaves, absence of water uptake, 147
Tween-fatty acid esters
membrane fatty acid composition, system for manipulation, soybean cell cultures, 771
metabolism, cultured soybean cells, 780

U

UDP-glucose, solubilization, GlcNAc-1-P-transferase, soybean cells, 748
Uncouplers, leaflet movement, metabolic inhibitors, *Cassia fasciculata*, 270

V

Vacuoles
exoamylase activity, pea and wheat leaf protoplasts, 1119
protoplast and tonoplast vesicle proteins, electrophoretic analysis, CAM plants, 916
Vicia faba (*see* Broad bean)
Vigna radiata (*see* Mung bean)
Vitamin C, lipid peroxidation, role of glutathione reductase, higher plants, 700
Voodoo lilies, mitochondria, alternative oxidase, characterization, 1

W

Water
magnetic resonance microscopy, *Pelargonium hortorum* roots, 1158
oxidation complex, *Chlamydomonas*, 114
oxidizing enzyme, photoactivation, wheat, 261
oxygen and hydrogen isotope ratios, photosynthetic tissues, CAM and C_3 plants, 428
oxygen isotope exchange, cellulose synthesis, carrot/*Acetobacter xylinum*/castor bean, 423
Water hyacinth, photosynthesis and growth, carbon dioxide enrichment, 528
Water potential, low, photosynthesis, sunflower, 90
Water stress
adaptation of plant cells, metabolic changes, tomato, 890
ion transport and, wheat mitochondria, 936
organic acid and carbohydrate compositions, cotton plants, 724
photosynthetic responses to leaves, photoacoustics and related methods, tobacco, 827
photosynthetic responses of leaves, photoacoustics and related methods, tobacco, 834
uptake, turgor recovery, wilted cabbage leaves, 147
VA mycorrhizal and nonmycorrhizal rose plants, osmotic adjustment in leaves, 765
Welwitschia mirabilis, leaves, gas exchange, stomatal components, 173
Wheat
C_4 pathway enzymes, variation in amounts, 96

dwarf
aleurone, GA_3 responsiveness, 688
aleurone, IAA-induced GA_3 sensitivity, 685
endosperm
development, gene expression, 34
sucrose synthase activity, 7
grain filling, amino acid composition, transport pathway, 1019
grains, accumulation and conversion of sugars, 1024
mitochondria, water stress and ion transport, 936
protoplasts, exoamylase activity, vacuoles, 1119
seedling, uptake of nitrogen species, 1051
White clover, transfer of carbon dioxide, diffusion, 1167
White oak, seedlings, nutrient-poor soil, atmospheric CO_2 enrichment, 83
Winged bean, nitric oxide and nitrous oxide production, during nitrate reductase assay, 718
Wounding, effects on cytokinin activity, cucumber cotyledons, 1151

X

Xylem
apple dwarfing interstocks, gibberellin A_4, 1090
apple seedling, paclobutrazol translocation, 11
cavitation, detection in corn, field conditions, 597
phloem exudates and, polyamine presence and identification, various plants, 1154
transport of nitrogen, peanut, 946
Xyloglucan
cellulose and, pea, 301
rhamnogalacturonan I and, immunogold localization, sycamore cells, 787
Xylogucan nonasaccharide, fucose-containing, biosynthesis, pea microsomal membranes, 379

Z

Zeatin, ribosylzeatin and ribosyl-1''-methylzeatin, secretion, *Pseudomonas savastanoi*, 742
Zein, serial analysis, isoelectric focusing, sodium dodecyl sulfate gel electrophoresis, 196
Zucchini, hypocotyls, calcium uptake, endoplasmic reticulum, 47
